Family Worship Center, Aberdeen SD

Creating High Performance Buildings with only
One Product, One Trade, OneStep!

The exterior design of the Family Worship Center incorporated a two-tone split face masonry finish, blending gold and brown earth tones through color bands and corner columns. By using the OneStep Building System with integral color and water repellant, the church is not only attractive, but the walls will never need painting. Further, the OneStep Building System provides the security and strength of cast-in-place concrete and includes hurricane straps which anchor the roof trusses securely to the concrete, which provides tremendous wind resistance.

**All of this performance is achieved using only
One Product, One Trade, and OneStep!**

**High R-Value + High Thermal Mass =
Great Energy Efficiency!**

"We used our air conditioner a total of four hours the entire summer! During our summer hot spells we had temperatures of 90 to 100 degrees, yet when I came into the church early Sunday morning to prepare the building for services, the temperature of the sanctuary was a comfortable 74 degrees. The OneStep Building System is really working well for us."

- Lee Klitzke, Church Elder and Treasurer

Saving Energy, Saving Money

"In our old 7,000 sq ft building, which was a wood-frame building with a brick veneer, we spent up to \$700 per month on utilities. Over the first six months in our new 10,600 sq ft OneStep building, we have been averaging about \$150 per month."

- Tim Douglas, Pastor, Family Worship Center

The interior walls of the sanctuary utilize a mix of integrally colored OneStep units. Tan ground units along the side walls create a rich, smooth texture, while brown split-faced units used above the windows and behind the podium enhance acoustics within the sanctuary. The blending of rich earth tone colors and the contrasting textures create a warm and comfortable setting for worship.
